

BRAZEAU COUNTY, ALBERTA

August 9, 2017

To Whom It May Concern:

We applied Cypher Environmental's long term dust control and haul road stabilization solution, EarthZyme (EZ) with a Dust Stop Liquid Concentrate (DSLCL) topical seal coat in 2016. Two very heavily trafficked roads, Range Road 53 and Range Road 63 were treated and we are very happy with the ongoing results and significant reduction in operational/maintenance costs.

We also have treated more roads with EZ with a DSLCL seal coat this year as well, and we are anticipating the same excellent results.

We have also applied Cypher Environmental's newest Dust Stop Municipal Blend (DSMB) product recently on a haul road this year, which is their environmentally friendly, cost competitive alternative to chlorides. DSMB was advertised to be competitive with chlorides in terms of cost and effectiveness. So far, the product has performed well and has stood up to the elements very well; with several periods of rainy, hot, dry and windy weather. The product particularly exhibited excellent properties during and after rain.

We were also extremely pleased with the great customer support, including both remote and on-site assistance during and after the application of the product. We continue to see outstanding results and reductions in our operating/maintenance costs and are very happy with the dust control and gravel road stabilization provided.

We look forward to future projects involving Cypher Environmental.

Sincerely,

Winston Rossouw
