

# EARTHZYME SOIL STABILIZER

APPLICATION: CURRIES LANDING ROAD, CORNWALLIS, MB

These photos were taken this past fall from Curries Landing Road in the RM of Cornwallis, MB (near Brandon). This haul road, which is a main road to 6 gravel pits and sees 300+ loaded trucks a day, was treated with EarthZyme in 2015, so 4 full seasons of little annual maintenance and exceptional dust control and stabilization. As you will see, the road is like concrete. The Brandon University tried using a core drill but it wouldn't drill the surface. They used a concrete saw instead.
